Dear Mr. Moidel,

This letter is submitted by Whizards Gift Shop at Science North on behalf of Mr. Moidel of Space Viz Productions.

Science North is a Science Centre and family attraction that opened in Sudbury, Ontario, Canada in 1984 and has since welcomed millions of visitors from around the world.

The products at Whizards Gift Shop familiarize the general public with the natural sciences and nature. Astronomy helps to make people aware of the importance of protecting our natural heritage and of the relationships between humans, the environment and the universe.

We understand that Mr. Moidel is applying for a contribution for a documentary project entitled "Space Capsules" and we would encourage you to support this project. Hubble's mission is to give us a better understanding of the universe by answering questions mankind has been asking for millennia about our place in the universe and our origins. Hubble has been able to answer many cosmological questions while raising new ones.

Hubble's 'eyes' have enabled film makers, like Mr. Moidel, to teach people about astronomy. "Space Capsules", I believe, would be of great interest by the public at large and would certainly sell in our store.

A 48 minute television show on this subject is long awaited. The short capsule format is especially great for students in a classroom setting, leaving time for Q&A.

We are interested in considering the inclusion of "Space Capsules" in our product assortment on-site as well as in our web store.

Sincerely yours,

A handwritten signature in cursive script, appearing to read "Renée LePera".
