Subject : Letter of support for « Space Capsules »

Dear Mr. Moidel,

This letter is submitted by the « La Maison de l'Astronomie », on behalf of Mr. Moidel of Space Viz Productions.

The mission of the La Maison de l'Astronomie is to familiarize the general public with the natural sciences and to teaching people a bit of astronomy through the sales of astronomy equipment and tools. Astronomy helps to make people aware of the importance of the protection of our natural heritage and the relationships between humans, the environment and the cosmos.

We understand that Mr. Moidel is applying for a contribution to a project entitled « Space Capsules » and we would urge you to support this project.

Hubble's mission is to give us a better understanding of the universe by answering questions mankind has been asking for millenia about our place in the universe and our origins. Hubble has been able to answer many cosmological questions while raising new ones.

Hubble's « eyes » have enabled film makers, like Mr. Moidel, to teach people about astronomy; which is our mission as well. We believe that « Space Capsules » would be of a great interest to the public and would be certainly a great addition to our store.

A 48 minutes television show on this subject is long awaited.

We are very interested in considering the inclusion of « Space Capsules » in our catalogue and online store.

Robert Lotte, Director
